Figure 1. Number of Live Births and Number of Children Still Living at Time of Survey By Years of Completed schooling, Brazilian Women Ages 45-54, 1984 PNAD.
Figure 2.
Cumulative fertility to age 30 for female birth cohorts, married Brazilian women, 1935-1952; Actual fertility (smoothed as 3-year moving averages) and predicted fertility based on regression coefficients in Table 2 and actual schooling distribution for each cohort.
Number of Births to Women Ages 24-27, 27-30, and 30-33
By Years of Completed schooling, Brazilian Women, 1984 PNAD.
Proportion of Women Working, Ages 24-27, 27-30, and 30-33
By Years of Completed schooling, Brazilian Women, 1984 PNAD.
Figure 4. Mean log wage by years of schooling, relative to women with zero schooling, Brazilian men and women ages 30-34, 1984 PNAD.
Years of schooling of 12 year-olds and 14-year olds by years of schooling of mother, Brazilian women, 1984 PNAD.
One-year survival rate of first child, women ages 30-34 and 45-49 by years of completed schooling, Brazilian women, 1984 PNAD.

Proportion Surviving to Age 1

- Women 30-34
- Women 45-49

Years of completed schooling of mother
